

16.8. Java program to execute the metadata extraction program

[A copy of this file (FGDCEExtractClient.java) can be found at the PICES web site.]

```
package gov.noaa.foci.mdb;

/**
 * @author Dan Klawitter
 * 11/07/2004
 *
 * Client for running FGDCEExtract from command line or cron job
 */
public class FGDCEExtractClient {

    public static void main(String[] args) {
        try {
            FGDCEExtract ext = new FGDCEExtract();
            System.out.println("Running FGDC Extract ...");
            ext.initialize();
            ext.execute();
            System.out.println(ext.getTableSize() + " Records Extracted to
" + ext.getDataDir());
        } catch (Throwable theException) {
            theException.printStackTrace();
        }
    }
}
```
